## What is LINETURF?

LINETURF is a specially fabricated permanent marking system for natural grass sports fields. LINETURF is made from durable polyethylene (monofilament) fibers, 2.25 inches high (5.71 cm) tufted onto a porous urethane backing 7 inches wide (17.78 cm). The marking line consists of white fibers 4 inches wide (10 cm) in the center and is flanked on both sides with green fibers. LINETURF is placed into a small trench cut into the soil and infilled with a calculated mixture of DRY SAND and recycled crumb rubber. A sod-cutter equipped with a special blade is used to cut the sod to the exact dimensions required to accept LINETURF. This unique marking system eliminates the need for painting or chalking of sports fields. Available colors: white or gold (yellow).

## Saves Money

LINETURF can be installed on any natural grass sports field. No more painting or chalking is required. Repetitive maintenance and repairs of expensive painting and/or chalking machines are a thing of the past. Once installed, the lines are permanent and become part of the field. In winter, you can use the fields for skating rinks or any other winter sports without damaging the marking lines.

## In what format is LINETURF available?

- Box of 100 linear feet (30.48 linear meters)
- Box of 200 linear feet (60.96 linear meters)

## What kind of applications can it be used for?

LINETURF may be used on all types of natural grass fields and it was primarily intended for sports fields. LINETURF is used for markings on soccer, football, rugby, baseball and many other types of sports fields. They have also been used for golf cart paths, emergency lanes, aircraft landing zones, parachute targets, helicopter landing pads and many other various uses.

## Maintenance

- Regular mowing of the grass does not affect the marking lines.
- The lines are at ground level - not at the height of the grass.

Games never have to be canceled with LINETURF, they are permanent! You do not need to have personnel on call to work painting or chalking lines after hours or on week-ends. Think of the players first.

*(Technical documents are available for architects or municipalities)*

## Installation of LINETURF

An installation manual is supplied for your personnel with each order. LINETURF is easily and rapidly installed. You may have LINETURF installed by your own crews or by one of our authorized agents. An installation supervisor is available upon request (extra fees are applicable for this service). LINETURF does not harm the environment. Full field markings including circles and other markings are more visible even with night lighting and are never washed away after a rainfall as with paint or chalk lines.

LINETURF is patented in the USA 6048282, in Canada 2,238,953, in Europe and in many other countries.

## Durable and Time Tested

LINETURF is warranted for 8 years under normal use or discoloration of the fibers from exposure to ultraviolet light (U.V.) on installations performed as recommended by the manufacturer. These long lasting, commercial quality durable fibers can last 10 years or more. You will save lots of time and money with a LINETURF installation.
